Cricket Player Performance Tracking Application : CRICKSTATS

1. INTRODUCTION

1.1 Project Overview :

CRICKSTATS is a Salesforce-based application designed to track, manage, and analyze cricket players' performance on a match-by-match basis. The system uses custom objects, relationships, dashboards, and automation tools to provide structured performance insights.

It enables coaches, analysts, and administrators to record player statistics, generate reports, and support strategic decision-making.

1.2 Purpose :

The main purpose of this project is:

To digitize player performance records

To improve accuracy and accessibility of cricket statistics

To provide real-time analytics

To support player development and team planning

To automate data management using Salesforce

2. IDEATION PHASE

2.1 Problem Statement

PS-1: A cricket team coach wants to track player performance across matches, but cannot get accurate statistics easily because the data is stored in different files and formats. This makes the coach frustrated and unsure about team selection.

PS-2: A team manager wants to maintain complete player records, but it takes too much time to update and verify the data because most records are maintained manually. This makes the manager feel stressed and inefficient.

PS-3: A sports analyst wants to analyze player trends and generate reports, but finds it difficult to compare performances because there is no centralized analytics system. This makes the analyst feel confused and dissatisfied.

3.REQUIREMENT ANALYSIS PHASE

Functional Requirements

- Add, update, and view player details.
- Record match performances of players.
- Track statistics like runs scored, wickets taken, and matches played.
- Generate reports for player and team performance.
- Display dashboards for quick performance analysis.

Non-Functional Requirements

- The system should be easy to use.
- Data should be stored securely.
- Reports and dashboards should load quickly.

4.Proposed Solution

Description

CRICKSTATS provides:

- Custom objects (Player, Match Performance)
- Master-detail relationships
- Roll-up summaries
- Lightning App
- Automated flows
- Interactive dashboards

Key Features

- Centralized database
- Live statistics
- Secure access
- Scalable design
- Easy reporting

Architecture Layers

- Presentation Layer (Lightning UI)
- Application Layer (Flows, Logic)
- Data Layer (Objects)
- Analytics Layer (Reports)

5.ADVANTAGES & DISADVANTAGES

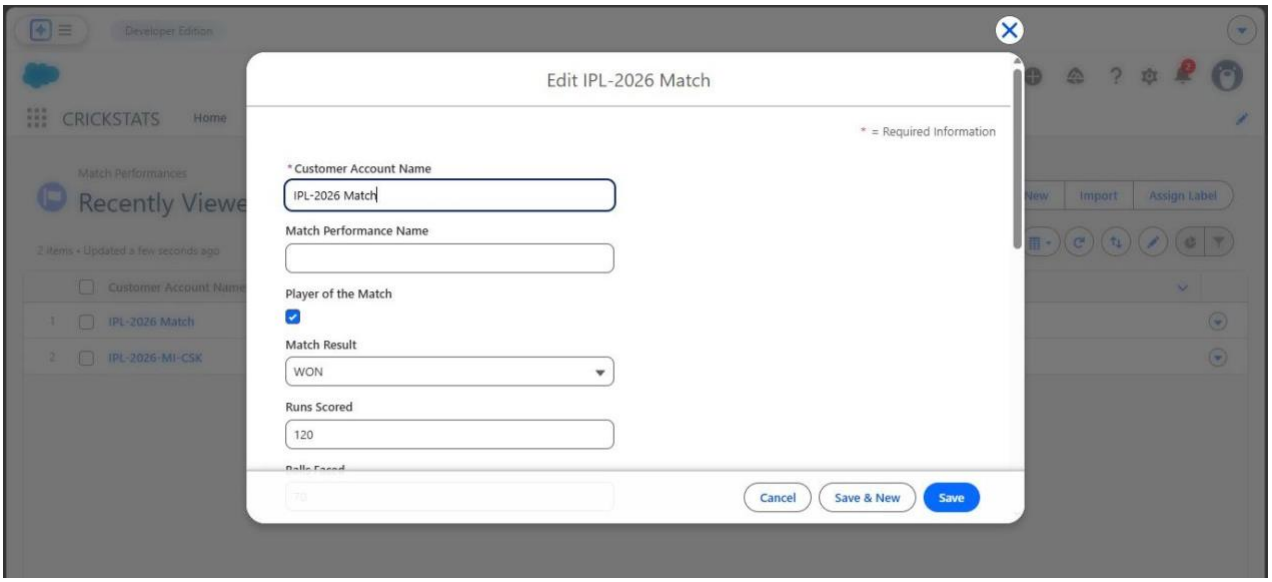
Advantages

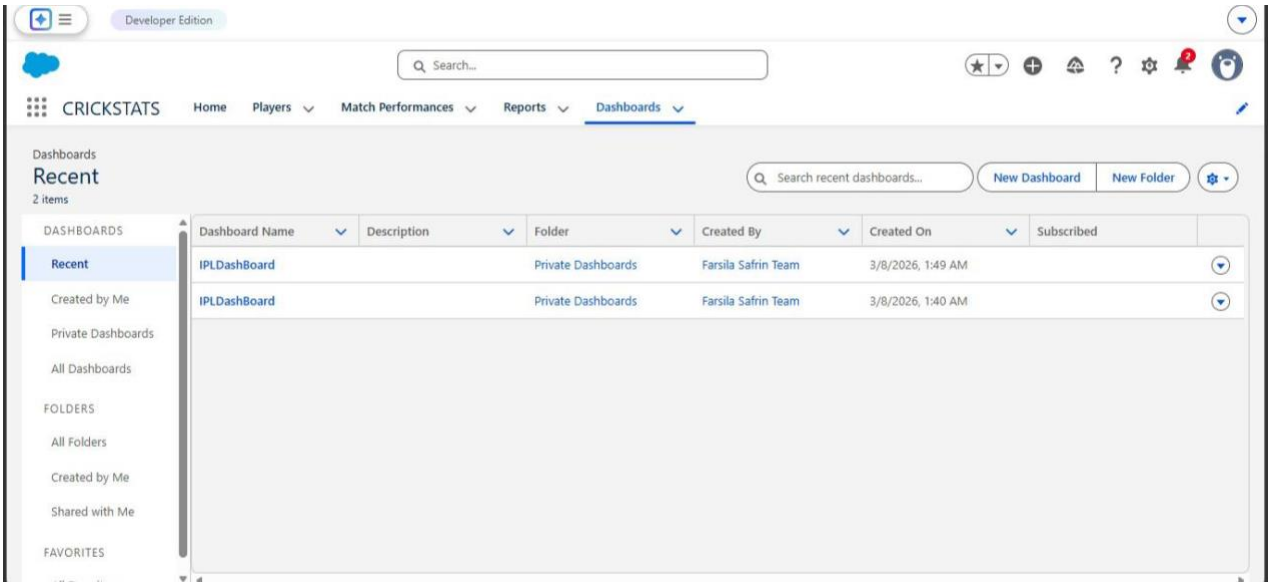
- Centralized system
- Real-time analytics
- Secure platform
- Scalable design
- Reduced manual work

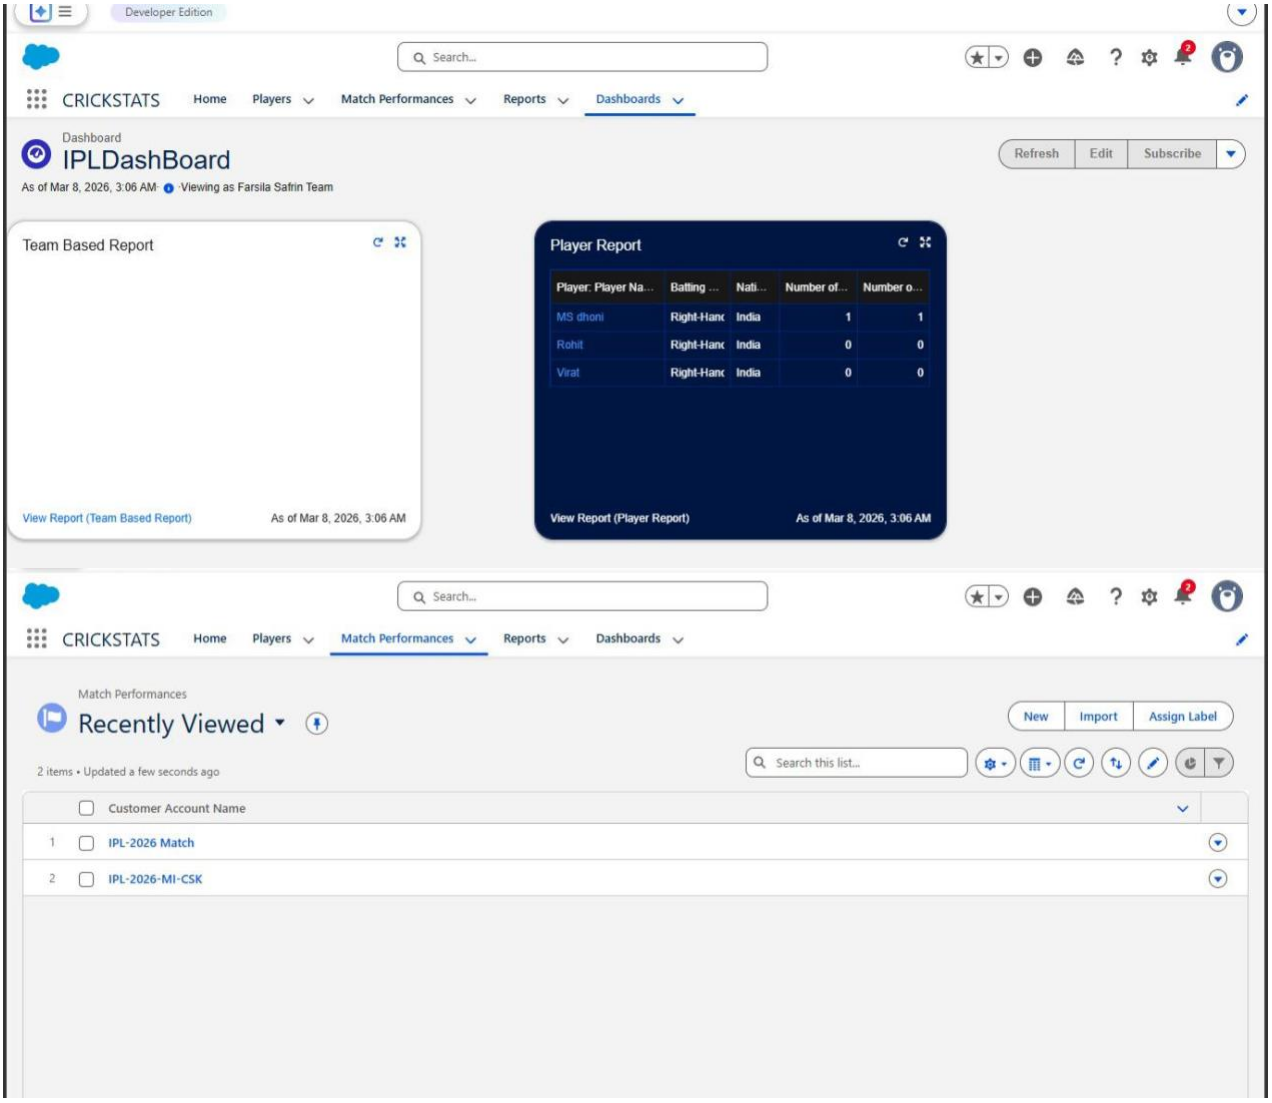
Disadvantages

- Requires Salesforce license
- Internet dependency
- Limited offline access

6.Screenshot of the project







7. Conclusion:

CRICKSTATS successfully implements a cloud-based cricket performance tracking system using Salesforce. The system automates data management, improves reporting accuracy, and supports informed decision-making.

The project demonstrates practical application of SDLC, Agile methodology, and CRM-based development.

8. FUTURE SCOPE

- Mobile application integration
- AI-based performance prediction
- Video analysis integration
- Player ranking system
- Public statistics portal
- Multi-league support

Thank You
